

ASHINA C K

Full Stack Developer

Chennai, India | ashinack1999@gmail.com | 9061516054

<https://www.linkedin.com/in/ashina-c-k-613b3122a/> | github.com/ashinack_ | <https://ashinack.github.io/Personal-website/>

PROFILE

Full Stack Developer with 4 years of experience designing, building, and scaling end-to-end web applications using Angular, Node.js, Express.js, and MySQL. Skilled in REST API optimization, relational database modeling with Sequelize, and component-driven frontend architecture. Proficient in Agile collaboration and Git workflows.

TECHNICAL SKILLS

Frontend: Angular (v14+), TypeScript, JavaScript (ES6+), Angular Material, PrimeNG, Bootstrap, HTML5/CSS3, RxJS, Signals, GSAP .

Backend: Node.js, Express.js, RESTful API Architecture, JWT Authentication, Sequelize ORM, Event-Driven Architecture (RabbitMQ - basic/exploring).

Database & Caching: MySQL (Indexing, Transactions, Schema Design), Connection Pooling, Redis.

Tools & Practices: Git/GitHub, Postman, Agile/Scrum,Figma, Webpack, Component-Driven Development,Devops.

WORK EXPERIENCE

Full Stack Developer | Riota Private Limited, Chennai

Oct 2022 – Present

- Full-Stack Application Development: Designed, engineered, and maintained enterprise web applications across 4+ production web portals using Angular (v14+), TypeScript, Node.js, and Express.js.
- API Design & Integration: Built scalable RESTful APIs with JWT authentication, middleware integration, and clean asynchronous workflows, seamlessly integrating front-end Angular Material/Bootstrap interfaces with backend services.
- Database Optimization & Architecture: Architected and indexed MySQL relational schemas using Sequelize ORM, implementing connection pooling and transaction management to ensure high-performance data operations.
- Agile Collaboration & Engineering Standards: Collaborated in Agile/Scrum sprint cycles using Git/GitHub workflows, participating in peer code reviews, Postman API testing, and continuous deployment updates

PROJECTS

Vending Machine Web Portal | Angular, Node.js, Express.js, MySQL, ApexCharts, Socket.io / REST APIs

- Architected responsive front-end modules in Angular featuring interactive ApexCharts analytics dashboards, dynamic multi-theming, and multi-language localization (i18n) for real-time machine telemetry tracking.
- Built 30+ RESTful endpoints in Node.js/Express.js and optimized complex Sequelize/MySQL queries with target indexing, reducing average API response latency by 35% (from 450ms to ~290ms) across core user workflows.
- Engineered Role-Based Access Control (RBAC) with JWT middleware to manage distinct user tiers (Admin, Vendor, Customer) and integrated live customer service support modules.
- Collaborated in an Agile team via Git workflows, conducting peer code reviews and pairing with QA engineers to ensure API contracts and shift-left testing standards were met.

Battery Management System | Angular, TypeScript, RxJS, Chart.js, Node.js, Express.js, MySQL, JWT

- Engineered real-time battery monitoring dashboards using Chart.js, integrating dynamic dial gauges and multi-axis line graphs to visualize telemetry data and battery performance metrics for 50+ connected devices.
- Implemented reactive state management using **RxJS BehaviorSubjects** and Angular Material components, ensuring seamless asynchronous data streams and zero-latency dashboard UI updates.
- Designed and deployed secure REST APIs in **Node.js/Express** integrated with **JWT authentication** and granular Role-Based Access Controls (RBAC) across 20+ distinct user permissions for customer and admin management.
- Structured and indexed **MySQL** relational database schemas to handle high-frequency telemetry logs, optimizing payload size and reducing database query overhead by 40%.

Service Management Portal | Angular (Signals & RxJS), Node.js, Nodemailer, MySQL, Sequelize, Angular Material

- Designed a responsive **Angular** interface with adaptive layout rendering—delivering data-dense table views and rich analytics dashboards , alongside touch-optimized detail views, document/image upload pipelines, and card layouts for mobile devices.

- Leveraged Angular Signals for fine-grained state management alongside RxJS operators to power a real-time notification engine, dispatching instant email and in-app alerts across critical ticket events (creation, verification, SLA escalation, and closure). Built dynamic lifecycle workflows for 4 distinct ticket classes (Service, Commissioning, Decommissioning, Maintenance).
- Architected automated audit history trails across all ticket tables utilizing Sequelize ORM lifecycle hooks, capturing user actions, status transitions, and timestamps for operational compliance.
- Secured Node.js/Express REST APIs by implementing JWT authentication with Refresh Token rotation, Helmet.js security headers, Joi schema validation for request payloads, and granular Role-Based Access Controls (RBAC), Integrated **Nodemailer** with Node.js backend services.

Jetzygo - Medical & Tourism Booking Platform | [Angular](#), [Node.js](#), [PrimeNg](#) [Express.js](#), [MySQL](#), [Sequelize](#), [Nodemailer](#)

- Built dynamic admin modules to manage end-to-end medical treatment workflows and tour packages, supporting doctor-to-hospital associations, appointment scheduling, and package customization.
- Integrated Nodemailer with Node.js backend services to dispatch real-time transactional confirmation emails and in-app notifications upon successful treatment bookings, tour package reservations, and hospital registrations.
- Designed administrative overview dashboards displaying real-time booking statistics, doctor assignments, and active hospital metrics backed by optimized **MySQL** queries.

EDUCATION

B.Sc. Computer Science | Pondicherry University
Mahatma Gandhi Govt. Arts College, Chalakkara Post

2018 – 2021
